Mr. Charles E. Clark, Manager
Bureau of Land Pollution Control
Illinois Environmental Protection Agency
2200 Churchill Road at 2400 West Jefferson
Springfield, Illinois 62706

Dear Mr. Clark:

Last year we discussed a dust problem in the immediate area where we were disposing and on the road in my sanitary landfill, especially in dry weather, caused by the six-inch clay cover we put on the top of our daily filled area each evening. The next day as the trucks start coming in over the top of this dry clay their wheels grind up and churn this cover material into a powdery, dusty substance, like flour, which is very hard to control unless we have some method of oiling or sprinkling this area.

In the past we have coped with the problem by having a tank truck, with a sprinkle bar attachment on the rear, which hauls waste water mixed with a small amount of cutting oil, detergents and drawing compound from several factories.

They sprinkle this oily substance in the area where we dumped the previous day and on the road, we then run over it and compact it with our bulldozers and it serves to make a good road and settles the dust, completely eliminating this dust problem.

Last year we wrote a letter to you explaining our dust problem and at that time Mr. Douglas Andrews wrote us a letter (copy enclosed) which is self-explanatory. Since we have been having quite a dry spell in our area, we are again having a problem with dust and would like to have a special permit again to have this material consisting of waste water mixed with a small amount of cutting oil, detergents and drawing compound, sprinkled on our roads to eliminate this problem.

In addition to the above, also at the present time the Village of Park Forest is again asking us for permission to dispose of calcium carbonate and magnesium carbonate waste, which is generated by the Park Forest water treatment facility. Last year you gave us a special permit for disposing of this material (copy enclosed). This material is also very moist and when mixed with earth makes a fine cover material and helps to settle dust. We would again like to have special permit this year for disposing of this material and would appreciate it if you would send a copy of your reply to me, to Mr. Edwin C. Walrath, Village Sanitarian, Village of Park Forest.

We would also appreciate a prompt reply to the above to avoid running into any complaints.

Your Mr. Van Somerin was out last week and made a complete inspection of our sanitary landfill operation and said it was in very fine shape and we should continue to do the fine job. I know you will be interested in hearing how we are progressing with our Crete & Washington Township landfill site and would like to report that we have our large scoop and one bulldozer working down there every day, starting to cut in the road and the first trench.

We have had our engineers and surveyors in the site for almost one week, helping us to line up trenches as we found that the Shell Oil Company pipeline was improperly marked on previous surveys and we now have this all straightened out. I am planning to bring this and other information to you as soon as I have an opportunity to arrange an appointment.

Kindest personal regards.

Yours very truly,

INDUSTRIAL BUILDING OPERATIONS

Attention: Mr. Leopold C. Triam

Dear Mr. Triam:

Confirming our phone conversation earlier today, please be advised that the Village wishes to again avail itself of your Chicago Heights landfill operation to dispose of 5,000-6,000 cubic yards of lime sludge from our Water Treatment Plant operation. As you know from previous experience, this sludge is approximately 80% water by volume. The solid components consist of calcium carbonate (84%) and magnesium hydroxide (11%), with 5% miscellaneous material.

As in prior years, we expect to transport this material by private trucking contractor in units having 10 and 20 cubic yard rated capacity. However, because of the nature of the material and the risk of "slopping over" on the highways, we have determined by actual measurements that loads consist of 7 and 14½ cubic yards, respectively.

We are anxious to begin this disposal operation as soon as possible and would appreciate word from you as to when we can start; also, your rate schedule for the season.

Very truly yours,

B. W. Osterling

Dear Mr. Triem:

ENVIRONMENTAL PROTECTION AGENCY

Supplemental Permit is hereby granted to the above named holder of Illinois Environmental Protection Agency, Division of Land Pollution Control Permit No. 1972-5 to dispose of industrial waste as described in the Permittee's letter of July 26, 1972. The disposal of this material shall be in accordance with the method described in the aforementioned letter and shall be performed solely when required for dust control. The quantity of material deposited shall not exceed the minimum quantity necessary for dust control.

Very truly yours,

ENVIRONMENTAL PROTECTION AGENCY

Dear Mr. Triem:

This will serve as permission from this Agency to dispose of oil waste material on your landfill site located in Chicago Heights in accordance with your request limited by the following conditions:

1. The oil will be spread on roads within the site for the purpose of controlling dust.
2. Spreading of oil will be done only to the extent necessary for surfacing of the roads.

If we can be of further assistance to you in this matter, please call on us.

Very truly yours,

ENVIRONMENTAL PROTECTION AGENCY

Permit #1972-5

RECEIVED
REGION VII

JAN 25 1972

Mr. Leonard G. Triem
10th & Grace Streets
Chicago Heights, Illinois 60411

Dear Mr. Triem:

ENVIRONMENTAL PROTECTION AGENCY
STATE OF ILLINOIS

Permit is hereby granted to Leonard G. Triem to install and operate a solid waste disposal site consisting of 15 acres within the N $\frac{1}{2}$ of the Sec. 10, T.25N., R.14E., of the 3rd S.M. in Cook County, Illinois, to handle municipal refuse and construction and demolition wastes all in accordance with the application and plans prepared by Joseph A. "Chudo" and Associates, George C. Ranney, Illinois Registered Land Surveyor; said application consisting of 7 pages dated January 6, 1972, and received by the Environmental Protection Agency on January 6, 1972; said plans consisting of 2 pages entitled "Plan of Survey" and "Landfill and Refuse Operation" dated January 4, 1972, and received by the Illinois Environmental Protection Agency on January 7, 1972.

The permit is issued subject to the standard conditions set forth on Page 1, attached hereto and incorporated herein by reference, and further subject to the following special condition:

Monitoring wells shall be installed. One well may be installed in Bore Hole #1. A second well should be installed at a convenient location near the northwest corner of the property. If a water bearing stratum is not encountered at a depth of 30 feet a slotted casing may be installed to a depth of 30 feet. The agency will establish a program for sampling and testing and will advise the operator of the times when results are to be submitted.

Very truly yours,

ENVIRONMENTAL PROTECTION AGENCY
